DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ueda et al (US Patent 5,985,014).

Ueda et al teach an ink composition comprising at least a coloring material, water soluble organic solvent, water, 0.01-5% by weight of alkylene oxide adduct of acetylene glycol (surfactant) and 2.0-8.0% by weight of polyalkylene glycol having a molecular weight of 150-600 (abstract and col. 2 lines 15-51). The coloring material may be any suitable coloring material including dyes and pigments in the amount of 2-6% by weight

(col. 2 lines 53-61). The reference further teaches that the ink composition may comprise an aliphatic alcohol (co-solvent) such as isopropyl alcohol in the amount of 1-6% by weight (col. 4 lines 20-30). Other conventional additives such as antifungal agent (biocides), corrosion inhibitor and oxygen-absorbent may be added to the ink composition (col. 5 lines 1-5). The reference remains silent as to what the ratio of pigment to polypropylene glycol is, however given the overlapping amounts of pigment and polypropylene glycol with Applicant's claimed range one of ordinary skill would obvious get an overlapping ratio when choosing from the overlapping ranges. Ueda et al fail to specifically exemplify the use of polypropylene glycol and a pigment as claimed by applicant. Therefore, it would have been obvious to one of ordinary skill in the art to use the polypropylene glycol and a pigment as claimed by applicant as Ueda et al also discloses the use of polypropylene glycol and a pigment but shows no example incorporating them.

Conclusion

The remaining references listed on forms 892 and 1449 have been reviewed by the Examiner and are considered to be cumulative to or less material than the prior art references relied upon in the above rejections.
